

# Hyper-Intensive

"HI" Series - Shrimp Grower Feeds

A complete feed developed especially for super-intensive and/or hyper-intensive shrimp production systems. Hyper-Intensive Shrimp 35 is designed to achieve maximum growth rate, maximum survival and other critical elements required to maximize profitability for recirculation systems. Excellent performance has been achieved in clear water, green water, and bio-floc environments in salinities as low as 10 ppt. First developed in 2001, this product has undergone continuous improvement to meet the changing demands of new and developing technology. Carefully selected ingredients are scientifically formulated to minimize the impact on water quality; while giving superior performance for the animals. Feed is the primary driver in intensive systems and therefore superior, specifically formulated feeds are needed.

- A unique formulation designed especially for production systems stocked at very high densities.
- Contains *Vpak* (Vitality Pak) to enhance disease resistance.
- The mineral content of Hyper-Intensive Shrimp 35 is carefully controlled to help maintain proper ionic balance of the water while slowing the buildup of potentially harmful divalent cations.
- Quality feeds come from quality ingredients. Zeigler suppliers are all pre-certified and ingredients undergo continuous testing at independent laboratories to assure their quality and wholesomeness.
- Manufactured in an ISO 9001:2015 Registered Quality Management System certified plant, which assures product consistency and quality
- A well proven product providing trust in its performance.

## GUARANTEED ANALYSIS

Crude Protein	Min	35%	Moisture	Max	10.0%
Crude Fat	Min	7.0%	Ash	Max	13.0%
Crude Fiber	Max	2.0%			

## PARTICLE SIZE & PACKAGING

2.4 mm x 2.5mm @ 35,000 particles/lb or 77,000/k  
25 kg (55 lb.) poly-woven bag, super sacks, and bulk

## INGREDIENTS

Marine proteins, plant proteins, grain and grain by-products, yeast and yeast by-products, vitamin and mineral supplements, Stay-C (a heat and water stable vitamin C), attractants, preservatives, and stabilizers.

## PRODUCT APPLICATION

- Feed as the only feed in intensive systems stocked at densities in the range of 100 to 1,000 animals/m<sup>2</sup> or m<sup>3</sup>. Continuous feeding is highly recommended because it is the nature of shrimp to feed continuously, also negative impacts on water quality are materially reduced when continuous feeding is practiced. If it is not practical or possible to feed continuously then the daily ration should be fed in equal proportions and at equal intervals throughout the day, as frequently as possible.
- Consult your area Zeigler technical specialist for additional feed guidance.

## STORAGE INSTRUCTIONS

- Poly-woven bag: best if used within nine (9) months from date of manufacture.
- Store in a cool (22° C/72° F), dry, well-ventilated area away from sunlight.
- Rotate stock to use the old feed first ("first in, first out" principle.)
- Keep bags stacked on pallets to prevent feed from being in direct contact with damp floors and walls. Avoid exposure to insects, pests and direct sunlight.
